ABOUT ME

Motivated Software Engineering student at FAST-NUCES(6thSemester)with hands-on experience in AI/ML and full-stack web development. Skilled in building intelligent systems and user-focused applications using Python, JavaScript, and modern frameworks. Combines strong analytical thinking with a creative and imaginative approach, with experience in UI design and digital illustration.

EDUCATION

- FAST-NUCES |Aug 2023–Present
  Bachelor of Science in Software Engineering
- Divisional Public School and College | June 2022
  FSc Pre-Engineering

WORK EXPERIENCE

Pursue Today | July 2025 – Aug 2025

Web Developer Intern

- Worked as a MERN stack developer at Pursue Today, building core backend systems including a user management API with Node.js and Express for CRUD operations.
- Implemented secure authentication using JWT, developed a Next.js-based auth portal with MongoDB integration, and created a responsive portfolio website while learning MongoDB and Google Search Console.

Cosmic Us | Jan 2026

Graphic Designer Intern

- Contributed as a Graphic Designer at Cosmic Us, a global youth organization, creating UI designs and promotional content using Canva and Sketch.
- Designed event-based social media stories and presentation materials for sessions like Policy Craft and ice-breaking activities, collaborating with teams via Discord.

PROJECTS

HypeWall (Aesthetic Appreciation Platform)

python, flask, javascript, html, css, mongodb, illustration(sketch)

- Designed and developed a customizable appreciation platform with aesthetic themes, real-time updates,and unique contributor/view link system.
- Implemented join-code based access, dynamic message updates, and responsive UI focused on user experience and creative expression.

CookieWise (Cookie Banner Detection Extension)

Javascript, chrome extension, selenium, dom manipulation

- Built an automated Chrome extension to detect cookie banners using vendor selectors, key word heuristics, and Mutation Observer for dynamic pages.
- Integrated real-time badge alerts, rich popup insights, and automated Selenium testing a cross major websites for validation.

EventEase (Event Management Platform)

React, Vite, Node.js, Express.js, MongoDB, JavaScript

- Designed and developed a full-stack event management platform enabling users to create, organize, sent invitations (with customizable templates) and manage events through an intuitive interface.
- Built responsive frontend components with React and optimized backend scalability through structured controllers, middleware, and database models.

MedPredict (Diagnosis Prediction from Clinical Notes)

Python, PyTorch, Hugging Face Transformers, FastAPI, BERT

- Developed an AI-powered diagnosis prediction system by fine-tuning a BERT model for multi-class classification of clinical notes.
- Integrated the trained model with FastAPI to provide an accessible prediction service and support deployment-ready workflows.

SKILLS

- C/C++, Java, Python, JavaScript, HTML, CSS
- SQL, React, MongoDB, Git, FLASK, NEXTJS, Figma
- Full-Stack Development, Machine Learning, Deep Learning, NLP, Computer Vision, UI/UX Design, Responsive Web Design
